**Abstract :**

BE-773658 A

Photosensitive compsn. comprises a mixture of 40-97% A and 3-60% B where A contains 15-80% of a linear water soluble poly-N-vinylpyrrolidone mol. wt. >1,000 and 20-85% of a polycarboxylic acid to mol. wt. >500, and carboxy content >=5%. B is an ethylenic monomer compatible with A. Pref. the polymeric acid contains 3-6C particularly acrylic acids and copolymers with maleic. Ethylenic monomers used are bis-acrylamide, 1:6-hexamethylene-bisacrylamide, N-methylolacrylamide/diol reaction products etc. The

composition may also include photoinitiators and polymerisation inhibitors. After exposure, the product is briefly heated at 60-130 degrees C.
